

Google Pixel 11 Singapore Price: Every Model, Every Tier, And Which One To Buy

Description

Google put four new phones on Singapore shelves from 20 August 2026, and the **Google Pixel 11 Singapore price** spread is wider than it has ever been. The cheapest is S\$1,299. The dearest, a 1TB Pixel 11 Pro Fold, is S\$2,999. That is a S\$1,700 gap for phones running the same chip and the same version of Android.

I have gone through every configuration on the Google Store Singapore site so you do not have to. Below is what each model actually costs, what genuinely changed this year, and the one model most people should stop scrolling at.

Google Pixel 11 Singapore Price: Every Model And Storage Tier

All four phones start at 256GB, which is the single most useful change this generation. Nobody has to think about 128GB any more. Here is the full list from the Google Store Singapore.

- Pixel 11, 256GB with 12GB RAM: S\$1,299
- Pixel 11, 512GB with 12GB RAM: S\$1,479
- Pixel 11 Pro, 256GB with 12GB RAM: S\$1,599
- Pixel 11 Pro, 512GB with 16GB RAM: S\$1,779
- Pixel 11 Pro, 1TB with 16GB RAM: S\$2,099
- Pixel 11 Pro XL: from S\$1,819
- Pixel 11 Pro Fold, 256GB with 16GB RAM: S\$2,499
- Pixel 11 Pro Fold, 512GB: S\$2,679
- Pixel 11 Pro Fold, 1TB: S\$2,999

Note the RAM jump on the Pro. Paying S\$180 to go from 256GB to 512GB also buys you 4GB more RAM, which is a rare case of the middle tier being the sensible one. On the standard Pixel 11, the same S\$180 gets you storage only.

What Is Actually New This Year

Every model runs Google Tensor G6 with a Titan M3 security coprocessor, launches on Android 17, and carries seven years of OS, security and Pixel Drop updates. Google says Tensor G6 handles on-device AI tasks up to 3.5 times faster than Tensor G5 while drawing up to 3.5 times less energy, with 25% faster web browsing. Secure boot now uses post-quantum cryptography, which matters more in five years than it does today.

The hardware changes you will actually notice are smaller and more sensible. Google cut the camera bar thickness by 40% on the Pixel 11, so it sits flat on a table. The Pro models get an anti-scratch display coating with more than double the scratch resistance of the Pixel 10 Pro. Wireless charging is now Qi2.2 at up to 25W with Pixelsnap magnets built in.

The genuinely new toy is HiLight, and it only appears on the Pro, Pro XL and Pro Fold. Coloured LEDs around the camera flash glow when your phone is face down, so you get a pattern when Gemini is listening or thinking, and a custom colour for calls from specific people. It is a small idea executed well. Whether it is worth S\$300 over the base model is another question.

Pixel 11 Versus Pixel 11 Pro: The Real Differences

The two phones are the same size on paper and very different in the hand. Both are roughly 6.3 inches, but the Pro runs an LTPO Super Actua panel at 1280 x 2856 that drops to 1Hz and peaks at 3,600 nits. The standard Pixel 11 uses a 1080 x 2424 Actua panel, 60Hz to 120Hz, peaking at 3,000 nits. Under Singapore's midday glare, that difference is visible.

The camera gap is the bigger one. Here is what separates them.

- Pixel 11: 48MP wide on a 1/1.56-inch sensor, 13MP ultrawide, 10.8MP 5x telephoto, Super Zoom to 30x
- Pixel 11 Pro: 50MP wide on a much larger 1/1.3-inch sensor, 48MP ultrawide with autofocus, 48MP 5x telephoto on a 1/1.95-inch sensor, Pro Zoom to 120x
- Selfies: 10.5MP on the Pixel 11 against 42MP with autofocus on the Pro
- Video: the Pro shoots 8K at 24 and 30fps via Video Boost, the Pixel 11 tops out at 4K
- Connectivity: Wi-Fi 7 and ultra-wideband on the Pro, Wi-Fi 6E on the Pixel 11

Google also enabled Portrait Mode at 5x on the Pro telephoto and says Night Sight now captures up to four and a half times faster. If you shoot a lot of low-light food and concert photos, that is the upgrade you are paying for.

The Pro XL And The Pro Fold

The Pixel 11 Pro XL is the same phone as the Pro with a 6.8-inch panel, a 5,115mAh typical battery instead of 4,850mAh, and 226g instead of 204g. It charges to about 75% in 30 minutes with a 45W PPS charger, against roughly 55% on the smaller Pro. Google's own claim is 15 hours of battery life from a 15 minute top-up. For a S\$220 premium over the Pro, the battery alone justifies it if you commute long and charge rarely.

The Pixel 11 Pro Fold is where the money stops making sense for most people. It is about 10% lighter and 1mm thinner than the Pixel 10 Pro Fold, with a 6.5-inch outer display, an 8-inch inner Super Actua Flex panel, and a new gearless hinge Google says makes it three times more durable. It also has a glass fibre composite back and IP68 rating. The catch is the camera.

Source: Google

At S\$2,499 the Fold ships a 48MP wide, a 10.5MP ultrawide and a 10.8MP telephoto with 30x Super Zoom. That is closer to the S\$1,299 Pixel 11's camera kit than to the Pro's. You are paying S\$1,200 over the base phone for the folding screen, 16GB of RAM and the sign-to-text feature, not for photography.

Which One To Buy

Short version, from someone who has handled all four.

1. Most people: the Pixel 11 at S\$1,299. Same chip, same seven years of updates, same 256GB, and a camera that will embarrass phones costing more.
2. Camera-first buyers: the Pixel 11 Pro at S\$1,599. The 1/1.3-inch main sensor and the 48MP telephoto are the real reason this model exists.
3. Heavy users: the Pixel 11 Pro XL from S\$1,819. Buy it for the battery and the faster charging, not the extra half inch.
4. Skip: the 1TB Pixel 11 Pro at S\$2,099. Cloud storage is cheaper than S\$320.
5. Skip unless you genuinely want a folding screen: the Pixel 11 Pro Fold. The cameras do not match the price.

Where To Buy And What The Launch Offers Are Worth

The Google Store Singapore is running launch promotions until 4 September 2026, and they are tied to the model you pick.

- Buy a Pixel 11: S\$300 off a Pixel Watch 5, or S\$300 in Google Store credit
- Buy a Pixel 11 Pro or Pro XL: S\$450 off a Pixel Watch 5, or S\$450 in Google Store credit
- Buy a Pixel 11 Pro Fold: S\$450 off a Pixel Watch 5, or S\$600 in Google Store credit
- Any model: S\$20 off a Pixelsnap case bought in the same order
- Pro models: six months of Google AI Pro, subject to eligibility

Take the store credit rather than the watch discount unless you actually wanted a Pixel Watch 5. Credit expires one year from issue and only works in Singapore, but it is closer to cash than a device you did not plan to buy. Beyond the [Google Store Singapore](#), the Pixel 11 range is also reported to be carried by Singtel, StarHub, Harvey Norman, Best Denki, Courts, and the official Google stores on Shopee and Lazada.

Telco bundles usually beat the outright price if you were renewing anyway, so check your contract date before you tap buy. Prices and promotions can change without notice, so confirm on the retailer's own page before you commit.
