Hawker Centre Closure Checker: Plan Around Cleaning Dates

Description

default watermark

Use the official hawker-centre closure dataset for the planned date, then verify the latest notice and centre ownership.

NEA publishes schedules for MSE-owned centres; HDB-owned centres may be handled by the relevant Town Council.

Search by exact centre

Centre names can have abbreviations, blocks and punctuation variants. Match address or location details before applying a closure row. (Data.gov.sg hawker closure dataset)

Spring cleaning and repair and redecoration can have different duration and scope. A row may cover the whole centre or include remarks that change interpretation.

Situation	What changes
Centre appears in the dataset	Read all date and remarks fields
Centre is MSE-owned	Verify against the NEA notice
Centre is HDB-owned	Check the named Town Council channel
No row is found	Do not infer that every stall is open; check the operator

Check the planned date

A yearly dataset is useful only when the date fields are read correctly. Convert any ranges into inclusive calendar dates and record the timezone. (NEA hawker announcements)

NEA directs users to its schedule for MSE-owned centres and to Town Councils for HDB-owned centres. Save the responsible channel so later updates are checked in the right place.

Example: A closure range from 17 to 19 August includes all three dates. A meal plan should name the affected centre, verified owner, closure type, backup location and latest check time.

Plan a genuine alternative

For an older person or family relying on the centre, identify another affordable meal source before the closure day. Check distance, opening hours, accessibility and dietary needs.

The dataset has a last-updated timestamp and closure plans can change. Recheck near the visit and contact the centre or owner for a critical delivery.

- Search exact centre
- Match address
- Read all closure dates
- Check remarks
- Identify owner
- Verify latest notice
- Save a backup food option
