

## IMDA ESER: Register Eligible Telecom Equipment for Five Years

### Description

ESER is a free five-year equipment-registration route for eligible short-range, low-power and specified telecom equipment.

The applicant must be a local ACRA entity with a Telecommunication Dealer Licence and must self-declare conformity.

### Classify the device

Bluetooth, WLAN, RFID and other listed categories may fit ESER, while cellular and base-station equipment use different routes. Record frequencies, output power, interfaces and intended use. ([IMDA equipment registration overview](#))

The company must be locally registered and hold the relevant dealer licence. Keep UEN and licence details current before applying.

| Situation                                      | What changes                            |
|------------------------------------------------|-----------------------------------------|
| Short-range or low-power device fits ESER list | Build conformity and brochure documents |
| Mobile terminal or broadband equipment         | Assess SER rather than ESER             |
| Base station, repeater or higher-risk radio    | Assess GER                              |
| Equipment is prohibited or exempt              | Do not force it into ESER               |

**Related:** [compare a different product-compliance route](#)

### Own the declaration

Automated approval does not mean IMDA reviewed the test report before registration. The supplier remains responsible for an accurate conformity assessment. ([IMDA IRIS ESER application](#))

Use acceptable test reports or certification, technical specifications, product picture and brochure. The model identifiers must match across every document.

**Example:** A Bluetooth product may fit ESER if its radio parameters and evidence meet the technical specification. A cellular handset does not become ESER-eligible merely because it also uses Bluetooth.

## Understand validity

New and modified-model ESER registrations are free and valid five years under the live application page. Schedule renewal and reassess changes that require a new registration.

IMDA may request the supporting test evidence after registration. Keep the complete technical file available, not only the registration email.

- Confirm dealer licence
- Classify equipment
- Check prohibited and exempt lists
- Match technical specification
- Collect test evidence and brochure
- Submit accurate declaration
- Calendar five-year review
