

Run For Singapore 2026: Dates, Costs and 61km Plan

### Description

default watermark

**Run For Singapore 2026 is a virtual 6.1km-or-61km challenge open from 1 August to 30 September 2026.** As checked on 21 July, the organiserâ??s live registration page listed the current â??Last Chance Discountâ• at S$32.90 through 24 July, followed by S$45.90 from 25 July to 8 August. The earlier S$27.90 figure previously shown on this page is no longer the live checkout price.

The practical decision is not simply whether the medal looks appealing. Check the distance, current tier, S$5 local-delivery charge, proof requirements and the time you can safely commit before paying.

## Dates, price and format at a glance

| Item | Verified detail | Reader action |
|---|---|---|
| Event window | 1 Augustâ??30 September 2026 | Choose a completion week with a weather fallback |
| Distance | Minimum 6.1km or full 61km challenge | Pick one realistic target before registering |
| Current tier | S$32.90 through 24 July 2026 | Recheck the live checkout total |
| Late tier | S$45.90, 25 Julyâ??8 August 2026 | Do not rely on an old article price |
| Local shipping | S$5; organiser states free local delivery at S$59 with added merchandise | Include delivery and add-ons in the budget |

The ActiveSG Circle event listing confirms the virtual format, event window and upload process. The organiserâ??s live category page controls the current price and checkout availability. Prices and slots can change, so save the receipt and category terms shown at payment.

## How the virtual race works

1. Choose the open category and an apparel size on the organiserâ??s registration page.

2. Run, jog or walk anywhere during the event window. The official event page says a treadmill is acceptable.
3. Track the attempt with a GPS running app or wearable.
4. Upload the activity screenshot through the submission portal.
5. Keep the original activity record and accepted-submission confirmation until delivery is resolved.

This is not a mass-start race with a measured course, timing mat, aid stations or on-site medical team. Route choice, hydration, heat management and traffic separation remain the participantâ??s responsibility.

## Choose 6.1km or build a 61km plan

A 6.1km attempt is a single-session task for many recreational walkers or runners. The 61km option is better treated as a cumulative project unless the organiserâ??s current category terms require otherwise. The organiserâ??s category description says participants can complete a minimum 6.1km or take on the full 61km.

default watermark

| Plan | Arithmetic | Use it when |
|---|---|---|
| 10-session plan | 61km Ã· 10 = 6.1km each | You already tolerate repeated 6km outings |
| 15-session plan | 61km Ã· 15 â?? 4.1km each | You want shorter weekday sessions |
| 20-session plan | 61km Ã· 20 = 3.05km each | You prefer frequent walks with lower per-session distance |

These are LBRD planning calculations, not organiser-prescribed training plans or medical advice. Add rest days and reduce the distance if pain, illness, haze or heat makes the plan unsafe. Anyone with a medical condition, new symptoms or a long break from exercise should seek appropriate professional advice before a demanding target.

## Build proof that will survive submission

Before the first attempt, read the organiserâ??s live FAQ and check whether the portal needs elapsed time, moving time, distance, date, route map or a particular screenshot layout. Use the same app throughout if possible. After every session, retain both the activity entry and an exported or screen-captured record showing the date and distance.

- Turn on location permission and wait for a GPS lock before starting outdoors.
- For a treadmill, confirm what evidence the organiser accepts because GPS distance may not record.
- Do not crop away the date, distance or account identifier if the portal uses them for verification.
- Keep a simple cumulative log for the 61km option and reconcile it to the submitted total.

## Pick a safer Singapore route

Prefer a continuous park connector, stadium loop or other route separated from road traffic. Start early or after sunset where lighting and personal safety are adequate, carry water and check the weather and haze outlook. A shaded loop with toilets and transport exits can be more useful than a scenic route that leaves no easy stop.

If you are comparing this virtual challenge with an organised road event, use our Singapore International Marathon 2026 guide. For a broader view of sustainable activity habits, see our Singapore wellness trends guide.

## What the fee includesâ??and what it does not prove

The organiserâ??s event homepage says the base open category includes a finisher T-shirt, e-certificate and e-badges. Although ActiveSG Circle describes an SG61 medal, the organiser currently lists the medal separately as a S$16.90 add-on. Do not assume a medal is included. Check the live category, size chart and checkout description because merchandise, add-ons and delivery timing may change.

Registering does not guarantee a personal-best time, delivery before National Day or acceptance of incomplete proof. The organiser says earlier registration improves the chance of receiving gear for 9 August, but the final-extension tier was already sold out when checked. Treat delivery dates as operational estimates unless the checkout gives an enforceable commitment.

## Final decision checklist

- Current checkout total, including S$5 shipping and any add-ons, is acceptable.
- Your chosen 6.1km or 61km plan fits the 1 Augustâ??30 September window.
- You have a safe route and wet-weather or treadmill fallback.
- Your tracking device can produce the proof the portal requests.
- The apparel size, delivery address and email are correct before payment.
- You understand that the event is independently organised and virtual.

*Sources rechecked 21 July 2026: ActiveSG Circleâ??s event listing and the organiserâ??s live event and category pages. LBRD did not enter the race, test the portal or receive a media benefit. No first-hand completion or delivery outcome is claimed.*

After registering, create one folder containing the receipt, category description, size selection, activity screenshots, cumulative-distance log and submission confirmation. This records review is the simplest defence against a missing upload or fulfilment query. It also preserves what the organiser actually promised at checkout if the live page later changes.
