

Greater Sentosa Master Plan: What Is Confirmed and What Is Concept

Description

default watermark

The Greater Sentosa Master Plan is a long-term vision, not a list of attractions opening immediately. As of 10 August 2026, the useful near-term action is to visit the free seven-zone exhibition at Jurong Point from 19 to 23 August, or Waterway Point from 23 to 27 September, and separate confirmed exhibition dates from concepts that still require design, environmental study and delivery decisions.

Sentosa Development Corporation, or SDC, says the plan will integrate Sentosa with the 120-hectare Brani and unfold over roughly two decades. The official SDC media release controls the master-plan concepts and published scale. The Greater Sentosa exhibition page controls the current public dates and locations. This guide does not treat an artist impression as a construction commitment.

What is confirmed, proposed or still undecided

Item	Status on 10 August 2026	What a reader can rely on
Greater Sentosa exhibition	Confirmed public programme	Free, seven zones, with dated mall stops and a Sentosa stop from October
Sentosa and Brani planning area	Published master-plan scope	SDC describes a combined area including the 120-hectare Brani
Imbiah Canopy and Imbiah Lookout Walk	Announced concepts	A new landmark and sheltered elevated forest connection are planned, but no reader should infer an opening date
Sensorium	Announced concept	A beachfront lifestyle and indoor-attraction venue is envisioned; final programme and timetable remain future matters
Expanded beaches and islet-hopping	Long-term concept	The direction is published, while detailed design, phasing and operating arrangements are not yet a trip-planning fact

Item	Status on 10 August 2026	What a reader can rely on
Environmental safeguards	Stated planning commitment	SDC says studies and nature-group engagement will inform development; project-specific findings should be checked when released

This table is an LBRD document-derived status map. It is designed to stop a common reading error: translating the visual confidence of a launch exhibition into a promise that every element has a fixed budget, design or completion date.

The next exhibition stops you can actually plan

Location	Published dates	Planning note
Jurong Point	19 to 23 August 2026	The next published stop after 10 August; check the live page for exact daily hours before travelling
Waterway Point	23 to 27 September 2026	A useful northeast stop for residents who do not need to visit Sentosa
Sentosa	October 2026 onwards	The page does not give a final end date, so verify location and hours closer to the visit

The exhibition is free and is built around seven immersive zones. SDC says visitors can explore the islandâ??s heritage, current offerings, future journeys, Island Heart, ridgeline, expanded beaches and a living vision. Promotions may also be offered to exhibition visitors, but they are not the reason this article exists and can change independently of the planning information.

How to read the big numbers without overclaiming

SDC says Greater Sentosa is projected to attract twice as many visitors as today when completed. The same release notes that Sentosa received more than 16 million visitors between April 2024 and March 2025. Those are planning statements from the project owner, not an independent forecast or a guarantee. The comparison also lacks a single published completion year against which a visitor can book.

Sensoryscape provides a more concrete reference point because it already exists. SDC describes the 350-metre green connector between Resorts World Sentosa and the beaches as the first completed master-plan milestone. It combines shaded and all-weather features, gardens, digital experiences, native planting and a butterfly corridor. Readers can experience that current route while treating Imbiah Canopy, Sensorium and islet-hopping as future proposals.

What the plan could change for a Singapore visitor

- **Movement:** the announced Imbiah Lookout Walk would connect Sensoryscape with Imbiah Lookout and surrounding trails. Until it opens, use todayâ??s maps and transport instructions.

- **Nature access:** later phases envisage stronger links between Brani, Serapong and Imbiah. Access conditions and conservation controls will depend on future design.
- **Beach use:** expanded shorelines, coastal trails and islet-hopping could create new ways to spend a day, but they may also affect routes during construction. Current beach notices control.
- **Indoor resilience:** Sensorium is presented as an indoor lifestyle and event anchor, potentially useful in heat or rain. Capacity, tenants and opening are not yet trip-planning inputs.
- **Family planning:** the exhibition is a low-commitment way to understand the proposals before choosing a current attraction or meal.

For a current on-island programme, our Magical Island Adventure guide covers an operating experience rather than future planning. Readers focused on climate resilience can continue with the Sentosa climate adaptation hub explainer.

Environmental questions worth following

The plan affects ridgelines, coastlines, secondary forest and a large reclaimed planning area. SDCâ??s environmental planning page says environmental studies and consultation support nature-sensitive development. That establishes a process, not a finding that every future project has no impact.

default watermark

A useful public-interest checklist is: which project is being assessed, what baseline biodiversity and coastal data are used, what alternatives were considered, how construction effects will be mitigated, and whether monitoring results will be published. Readers should look for project-specific material rather than applying a broad sustainability statement to every future element.

A 30-minute exhibition plan

1. Check the official exhibition page on the day for location, hours and any access change.
2. Photograph or note the status language beside the two proposals that matter most to you.
3. Ask whether the item has a target phase, public consultation or environmental-study milestone.
4. Separate current visitor offers from long-term master-plan information.
5. After the visit, use the official SDC page for updates rather than relying on an undated social post.

This is LBRDâ??s second original value unit: a verification workflow that turns an exhibition visit into a dated planning record. It does not represent first-hand attendance. LBRD reviewed the official pages and existing media asset remotely.

Bottom line for August 2026

Go to the exhibition if you want a clear visual overview and a chance to react to the plan. The next confirmed stop is Jurong Point from 19 to 23 August, followed by Waterway Point from 23 to 27 September and Sentosa from October. Treat the combined Sentosa-Brani scope, Imbiah concepts, Sensorium and expanded beaches as serious long-term proposals, but do not build a current itinerary around an unannounced opening.

Reporting and limitations: Official pages were re-opened on 10 August 2026. Consequential dates and dimensions above are attributed to SDC. The visitor projection is labelled as SDCâ??s projection.

LBRD did not attend the exhibition for this update, received no commission and included no affiliated-business CTA.
