

Zeekr 7X Singapore price: new Cat A variant from S$279,999

Description

default watermark

Zeekr has launched an updated 7X electric SUV in Singapore, and the headline is a new rear-wheel-drive Standard variant that fits Category A. The Zeekr 7X Singapore price starts from S$279,999, according to launch reports from 27 October 2026. It is the cheapest way into the 7X, but it is still a long way above the other Cat A EVs on sale here.

The updated range has three variants: RWD Standard, RWD Long Range and AWD Performance. Zeekr says the car has new bumpers, a new colour and extra driver-assistance features.

What the Standard variant gives you

The RWD Standard produces 100kW and 520Nm of torque, which is how it squeezes under the Cat A power ceiling. Its claimed WLTP city range is up to 598km. For context, Cat A COE closed at S$130,100 on 18 November, so the premium for a bigger, quicker car is built into the sticker.

Step up the range and the numbers climb quickly. These are the figures Zeekr and launch reports give for the other two variants:

- RWD Long Range: 335kW, claimed WLTP city range of up to 788km.
- AWD Performance: 500kW and 790Nm, 0 to 100km/h in 3.7 seconds, claimed WLTP city range of up to 699km.
- All three keep the 800V electrical architecture. Zeekr claims a 10 to 80 per cent DC fast charge in as little as 10.5 minutes.

Those charging and range claims are manufacturer figures, so treat them as best-case. Real-world results depend on the charger, the weather and how you drive.

What changed on the updated Zeekr 7X

The front bumper now has active grille shutters with visible air ducts on either side. The rear bumper is revised and the licence plate sits higher. Door micro switches move from the B pillar to the door handles.

Inside, there is a redesigned centre console, a brushed textile roof lining and laminated glass for the front and rear side windows. Buyers can pick Black and Purple interiors, while Black and Orange is reserved for the AWD Performance. The new Mystical Purple joins Crystal White, Onyx Black, Forest Green and Tech Grey.

On the tech side, an updated driver-assistance system runs on a J6M chip with seven cameras and three radar units. New functions are Remote Parking Assistance, Stop and Go Warning and Automatic Emergency Steering. A digital video recorder is built in.

Zeekr 7X Singapore price against other Cat A EVs

Motorist lists the RWD Standard at S$279,999 at the time of writing. It puts the Changan S05 at S$186,999 and the Xpeng G6 Air at S$224,999. That makes the Zeekr S$93,000 dearer than the S05 and S$55,000 dearer than the G6.

On paper the S05 and G6 Air claim longer WLTP city ranges, at up to 647km and up to 685km, against the 7X Standardâ??s 598km. So the extra money buys the 7Xâ??s size, the 800V charging and the styling rather than more range from the base car. Whether that is worth it is a personal call, kiasu buyers will want a test drive before deciding.

Where to see it and what to check

You can view and test drive the car at Zeekr Centre Singapore and Zeekr House. The RWD Long Range was on show at The Car Expo at Singapore EXPO on 24 and 25 October. The Singapore Motorshow returns to Suntec on 7 to 10 January 2027 with 38 brands, which is a good chance to compare it against rivals in one trip.

Before you commit, ask the showroom three things. What exactly does the price include, and how does it change with the current COE? Which variant is in stock? And what does the warranty cover for the battery?

We have covered a few other recent launches if you are shopping around, including the Alfa Romeo Junior Elettrica from S$82,888, the Xpeng L03 at S$202,999 and the Motorshow 2027 line-up.
